

Based in Texarkana, TX, DataCast, Inc. provides a broad array of technology services tailored to small and medium-sized businesses. Operating a Secure Data Center as our hub, and delivering productivity enhancement software solutions, we help companies improve network, application, and data management .

DataCast has been at the heart of the successful overhaul of our IT systems. As expected, we received professional advice on IT strategy issues and the implementation of the initiatives went very well. Equally important to us was their guidance that allowed us to make sound business decisions regarding our IT systems. We are very pleased with all they have done for us.

Providing technology services to improve Network, Application, and Data Management.

➔ **Managed Services** - With experience managing sophisticated networks including LAN's, WAN's, and "server farms", we provide turnkey services for network and desktop management.

Network Management Turnkey management that includes New Installations and Upgrades, 24/7 Remote Monitoring, Management Reporting.

Strategic Planning For companies that have outgrown their existing network, we can assist in the planning and design of infrastructure enhancements.

Help Desk / Technical Support Remote-control monitoring and trouble-shooting
Patch application and management
Anti-virus protection

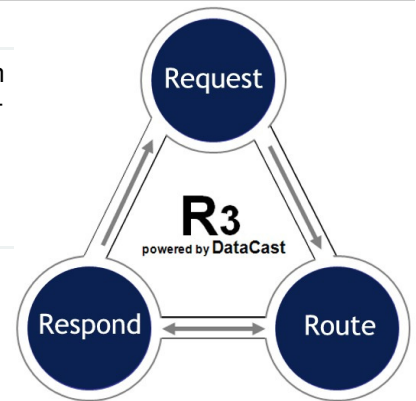

➔ **Software Solutions** - Vast experience in software applications that include Order Management, E-commerce solutions, Data Warehousing, Intranets and Extranets.

Corporate Intranet

Improve communication and information flow within your organization: Multi-Divisional, Cross-dept integration, Dynamic Content Management and Global Search capabilities from a single web portal.

Workflow / Process Management

Fully integrated with our Intranet Application, our **R3** application automates common processes within your organization. Data-driven processes and dynamic routing sequences enable real-time tracking and notification to appropriate parties.

Custom Software Development In addition to our packaged applications, we develop custom software applications for unique customer requirements.

➔ **Secure Data Center** - Brought online in 2001, our Data Center previously served as the nerve center for a multi-billion dollar pharmaceutical distribution company. Our facility offers an ideal environment for Data Backup and Restoration, and Application Hosting.

MS Exchange Hosting Enjoy the benefits of Microsoft Exchange Email capabilities without the burden of managing the physical server and administration responsibilities. Offered on a per user basis.

Application Hosting Hosting capabilities for web and corporate applications, in a safe, secure environment.

Full-Scale Disaster Recovery We offer a complete, affordable backup and disaster recovery (BDR) solution incorporating on-site data replication, off-site storage, and server virtualization in the event of hardware failure. Utilizing Network Attached Storage (NAS) Servers, we offer a variety of models to fit any size business.
