

The power of R3 will improve efficiency within your organization. We guarantee it...

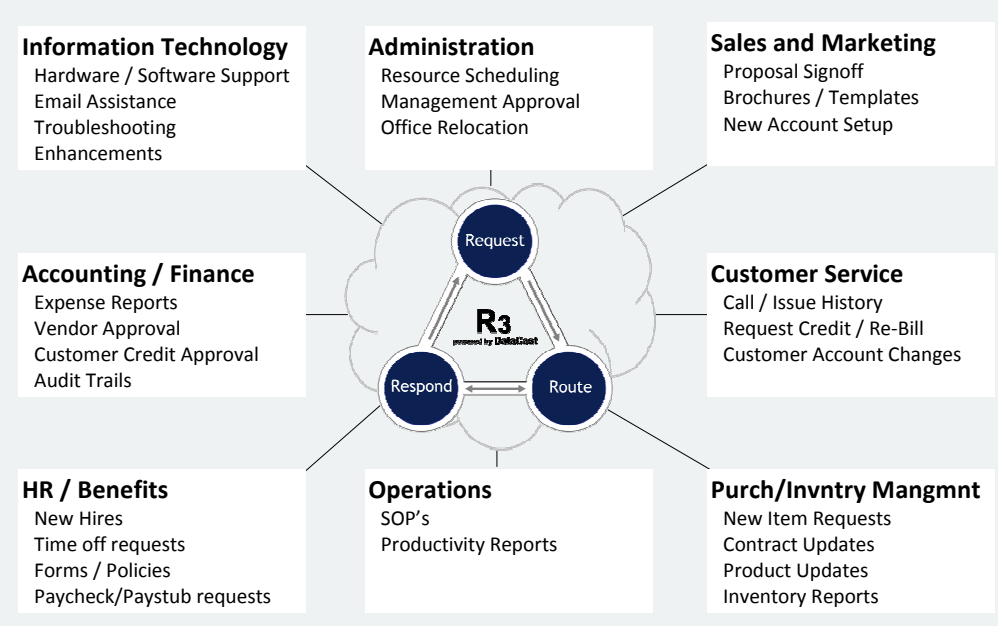

Even in today's business climate—post Sarbanes-Oxley and management demands to “go paperless”— most businesses continue to perform many of their back office functions in a manual, paper-intensive manner. Although email has enabled faster delivery of documents and data, its widespread over-use and lack of structured process flow often lead to duplicated and unnecessary efforts. DataCast's R3 application enables companies to automate their common processes, transforming from ineffective, repetitive efforts to an **automated process flow** environment that **improves efficiency and reduces cost**.

Connect all areas of your organization via a common web portal...

Deployed as a Corporate Intranet, DataCast's R3 provides a common platform for **information sharing and collaboration**. With the ability to dynamically define processes and routing sequences, common tasks are completed via a pre-set path that links all appropriate personnel. All activities performed during a given process are recorded, providing updates to key stakeholders and an audit trail for future reference. **Global keyword search** provides all users with quick access to enterprise-wide information.

Based in Texarkana, TX, DataCast, Inc. provides a broad array of technology services tailored to small and medium-sized businesses. Operating a Secure Data Center as our hub, and delivering productivity enhancement software solutions, we help companies improve network, application, and data management.

Automate the time consuming, paper-intensive processes that occupy too much of your employees' time and effort.

Application Features

- ✓ Multi-Division / Multi-Dept
- ✓ Process Automation
- ✓ Multi-Stop Routing Sequences
- ✓ Custom Dashboards/To-Do Lists

Project Management Module Now Available

A Project Management module (R3-PM) is now available, putting the power of R3 behind full-scale project management. This new module allows companies to collaborate more effectively on large scale initiatives. Features include the following:

Project / Task Management	
Create / Maintain Tasks	Included
Assign / Reassign Tasks	Included
Task Progress Tracking	Included
Target Start / Completion Dates	Included
Task Dependencies	Included
Recurring Tasks	Included
Project Time Lines	Included
Events / Milestones	Included
Project Templates	Included
Critical Path Method	Included
Event / Task Status Update Notification	Included
Broadcast Task Assignments	Included

ExtraNet Module targeted for release in Q4 2009

Our ExtraNet application will expand the power of R3 beyond a company's own internal boundaries, and enable collaboration with **customers and suppliers**. Regardless of your communication needs—collaborating on projects, responding to issues or requests, delivering targeted messaging—our ExtraNet will improve communication, increase efficiency, and raise your level of customer service.

Pricing Schedule

Our hosted software is priced on a per user basis, allowing our customers to pay for only the number of licenses that they need. Contact us to receive a free, no obligation estimate for your company.
